

WHAT IS CLAIMED IS:

1 1. A polishing fixture assembly for a fiber optic cable connector polishing apparatus,
2 comprising:
3 a plurality of segments holding a plurality of different types of fiber optic cable
4 connectors, a portion of each different type of fiber optic cable connector extending below its
5 corresponding segment; and
6 a hub interconnecting with each of said plurality of segments.

1 2. A polishing fixture assembly as recited in claim 1, wherein said hub holds said
2 plurality of segments stationary.

1 3. A polishing fixture assembly as recited in claim 1, wherein at least one of said
2 plurality of segments has an opening provided therein for receiving and holding a fiber optic cable
3 connector at a predetermined angle relative to the plane of said hub.

1 4. A polishing fixture assembly as recited in claim 1, wherein at least one of said
2 plurality of segments has an opening provided therein for receiving and holding a fiber optic cable
3 connector at an angle of six degrees relative to a plane perpendicular to said hub.

1 5. A polishing fixture assembly as recited in claim 1, wherein at least one of said
2 plurality of segments has an opening provided therein for receiving and holding a fiber optic cable
3 connector at an angle of eight degrees relative to a plane perpendicular to said hub.

1 6. A polishing fixture assembly as recited in claim 1, wherein at least one of said
2 plurality of segments has an opening provided therein for receiving and holding a fiber optic cable
3 connector perpendicular to the plane of said hub.

1 7. A polishing fixture assembly as recited in claim 1, wherein said plurality of segments
2 comprises six segments.

1 8. A polishing fixture assembly as recited in claim 1, wherein the portion of each fiber
2 optic cable connector extending below its corresponding segment is polished by a corresponding
3 polishing pad of the polishing apparatus.

1 9. A polishing fixture assembly as recited in claim 8, wherein a polishing medium aids
2 polishing between corresponding fiber optic cable connectors and corresponding polishing pads.

1 10. A polishing fixture assembly for a fiber optic cable connector polishing apparatus,
2 comprising:

3 a plurality of segment pairs, each segment pair holding a plurality of different types of
4 fiber optic cable connectors, a portion of each different type of fiber optic cable connector extending
5 below its corresponding segment; and

6 a hub interconnecting with each of said plurality of segment pairs.

1 11. A polishing fixture assembly as recited in claim 10, wherein the segments of each
2 segment pair are adjacent to each other.

3

1 12. A polishing fixture assembly as recited in claim 10, wherein the segments of each
2 segment pair are nonadjacent to each other.

3

1 13. A polishing fixture assembly as recited in claim 10, wherein said hub holds said
2 plurality of segment pairs stationary.

3

1 14. A polishing fixture assembly as recited in claim 10, wherein at least one of said
2 plurality of segment pairs has at least two openings provided therein for receiving and holding at
3 least two fiber optic cable connectors at a predetermined angle relative to the plane of said hub.

4

1 15. A polishing fixture assembly as recited in claim 10, wherein at least one of said
2 plurality of segment pairs has at least two openings provided therein for receiving and holding at
3 least two fiber optic cable connectors at an angle of six degrees relative to a plane perpendicular to
4 said hub.

5

1 16. A polishing fixture assembly as recited in claim 10, wherein at least one of said
2 plurality of segment pairs has at least two openings provided therein for receiving and holding at
3 least two fiber optic cable connectors at an angle of eight degrees relative to a plane perpendicular to
4 said hub.

5

1 17. A polishing fixture assembly as recited in claim 10, wherein at least one of said
2 plurality of segment pairs has at least two openings provided therein for receiving and holding at

3 least two fiber optic cable connectors perpendicular to the plane of said hub.

4
1 18. A polishing fixture assembly as recited in claim 10, wherein said plurality of segment
2 pairs comprises three segment pairs.

3
1 19. A polishing fixture assembly as recited in claim 10, wherein the portion of each fiber
2 optic cable connector extending below its corresponding segment is polished by a corresponding
3 polishing pad of the polishing apparatus.

4
1 20. A polishing fixture assembly as recited in claim 19, wherein a polishing medium aids
2 polishing between corresponding fiber optic cable connectors and corresponding polishing pads.

3
1 21. A polishing fixture assembly for a fiber optic cable connector polishing apparatus,
2 comprising:

3 a plurality of segments, said segments being arranged into a plurality of groups
4 including a first group and a second group, wherein the first group of said segments holds a plurality
5 of a first type of fiber optic cable connectors, and the second group of said segments holds a plurality
6 of a second type of fiber optic cable connectors, a portion of each different type of fiber optic cable
7 connector extending below its corresponding segment; and

8 a hub interconnecting with each of said plurality of segments.

9
1 22. A polishing fixture assembly as recited in claim 21, wherein each of the first and
2 second groups of said segments comprises three of said segments.

3

1 23. A polishing fixture assembly as recited in claim 21, wherein the first group of said
2 segments comprises four of said segments, and the second group of said segments comprises two of
3 said segments.

4

1 24. A polishing fixture assembly as recited in claim 21, wherein the plurality of groups
2 includes a third group of said segments that holds a plurality of a third type of fiber optic cable
3 connectors.

4

1 25. A polishing fixture assembly as recited in claim 24, wherein each of the first, second,
2 and third groups of said segments comprises two of said segments.

3

1 26. A fiber optic cable connector polishing apparatus, comprising:
2 a polishing fixture assembly having a plurality of segments holding a plurality of
3 different types of fiber optic cable connectors, a portion of each different type of fiber optic cable
4 connector extending below its corresponding segment, said polishing fixture assembly further having
5 a hub interconnecting with each of the plurality of segments; and

6

7 a polishing pad assembly having a plurality of wedges, each wedge aligning with a
8 corresponding fiber optic cable connector held in the polishing fixture assembly, said polishing pad
assembly further having a base interconnecting with each of the plurality of wedges.
